

14<sup>th</sup> June 2018

ASX MARKET RELEASE

## **Golden Mile Project delivers assays up to 76 g/t gold, 12,300 ppm Cobalt and 8.25% copper from maiden rock chip field investigations.**

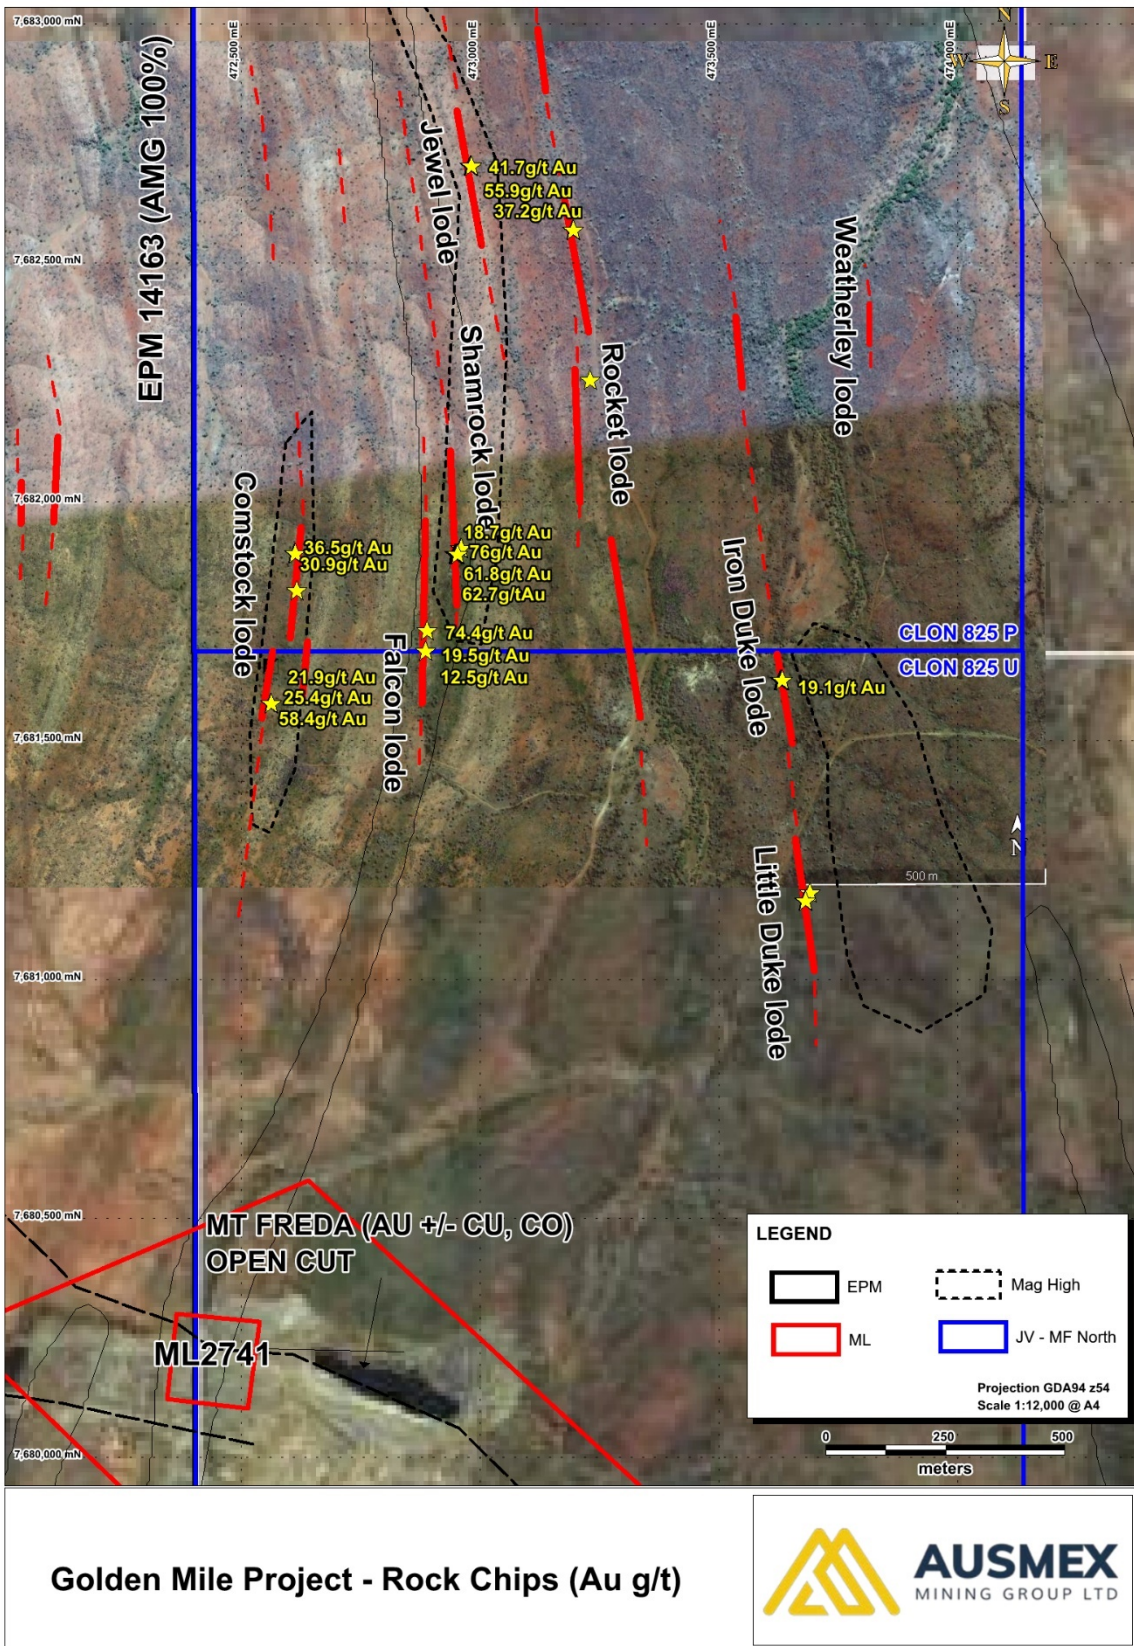

- **Ausmex has completed an initial field review of the recently acquired “Golden Mile” project that contains eight known historical mining prospects with initial rock chip results returning exceptionally high gold, cobalt and copper assays.**
- **~ 3km combined strike length of High-grade Gold, Cobalt & Copper associated with regional magnetic high interpretations.**
- **Visible cobalt (Erythrite) identified in outcrop at the “Jewel” prospect.**
- **Significant high-grade gold, cobalt and copper assays include:**
  - **“Jewel” prospect**
    - **Sample GR18R188 37 g/t Au with 12,300 ppm Co (visible erythrite)**
    - **Sample GR18R194 56 g/t Au with 2,880 ppm Co**
  - **“Shamrock” prospect**
    - **Sample GR18R118 76 g/t Au with 4,620 ppm Co**
  - **“Iron Duke” prospect**
    - **Sample GR18R156 19 g/t Au**
    - **Sample GR18R160 8.25% Cu**
- **Additional RC drilling commences at the Trump, The Joker, and the Carpet projects.**

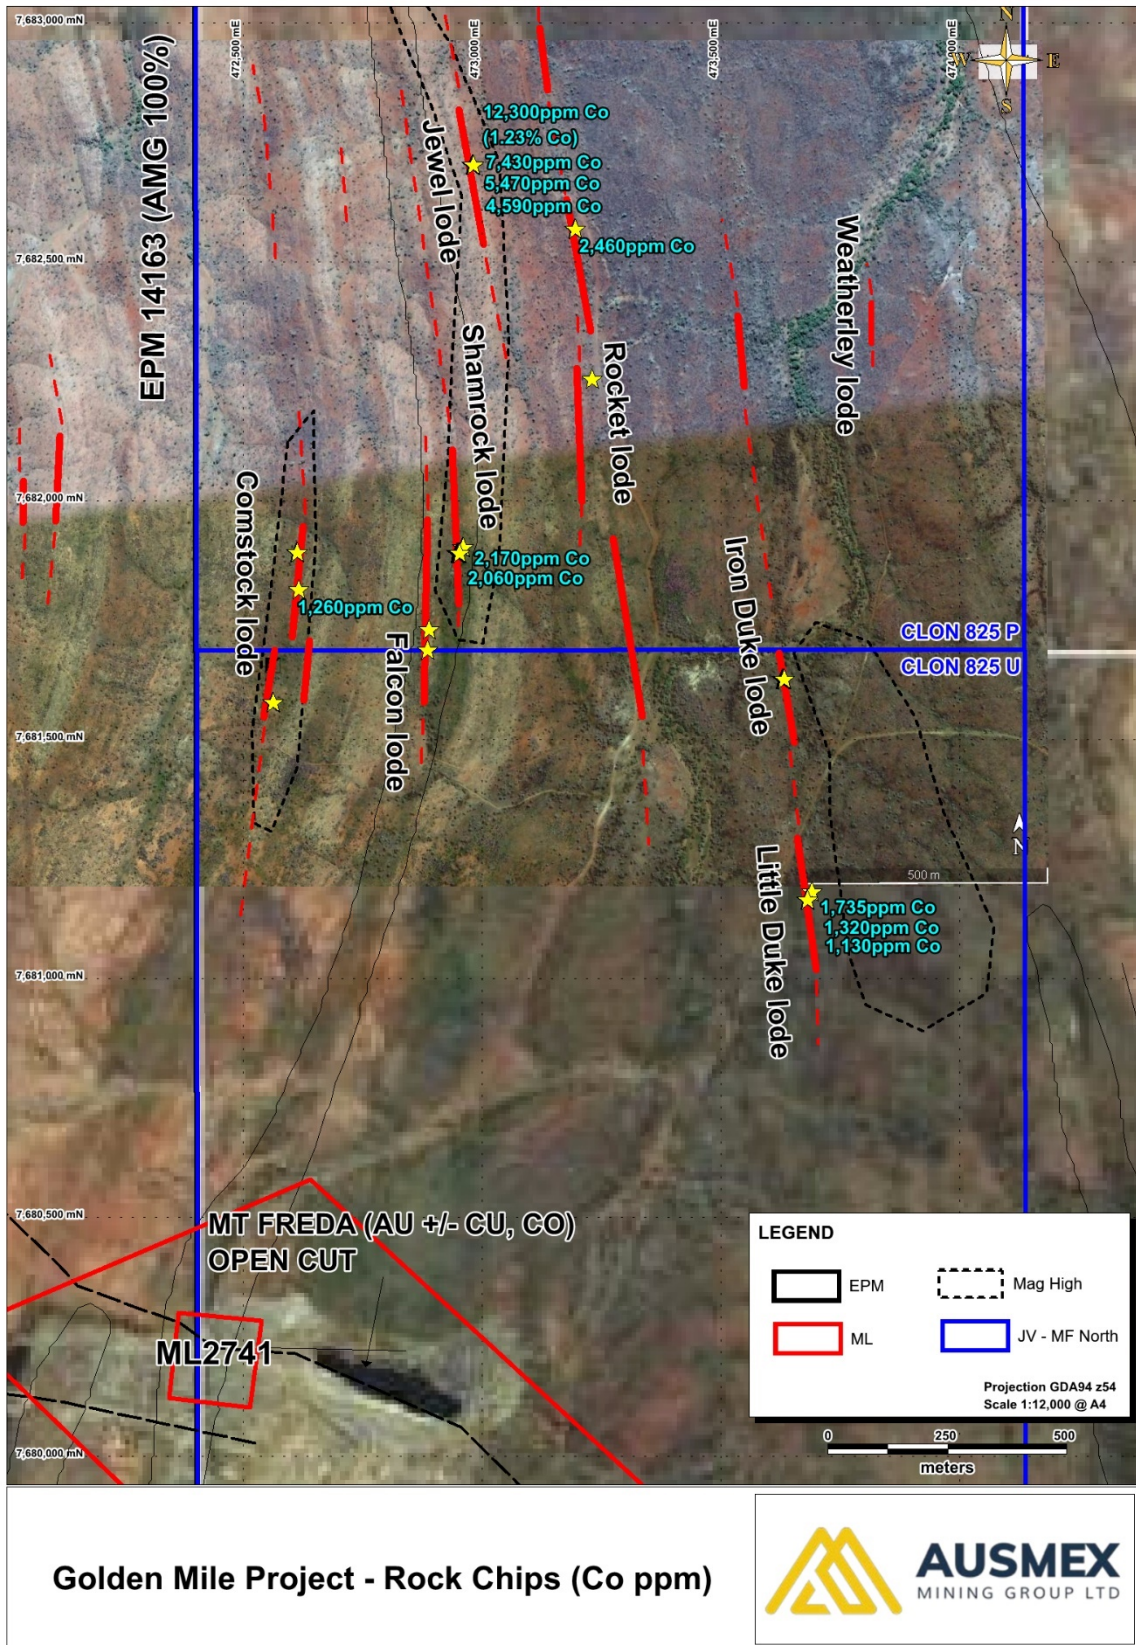

**Image 1.** Visible cobalt mineralisation "*Erythrite*" (pink mineralisation) in rock chip sample GR18R188 collected from the Jewell prospect that assayed **37 g/t Au** with **12,300 ppm Co**

**Table 1.** Significant rock chips assays >10 g/t Au, Ag, >1,000ppm Co, & > 1% Cu.

**Figure 1.** “Golden Mile” high-grade gold rock chips, note the exceptionally high-grade Comstock, Falcon, Shamrock, Jewel & Iron Duke prospects are all located on regional magnetic highs with a combined strike length of approximately 3 km.

**Figure 2.** “Golden Mile” high grade cobalt rock chips, note the exceptionally high cobalt values found in the Jewel and Shamrock lode share the same magnetic anomaly with an ~ 1.5 km strike length.

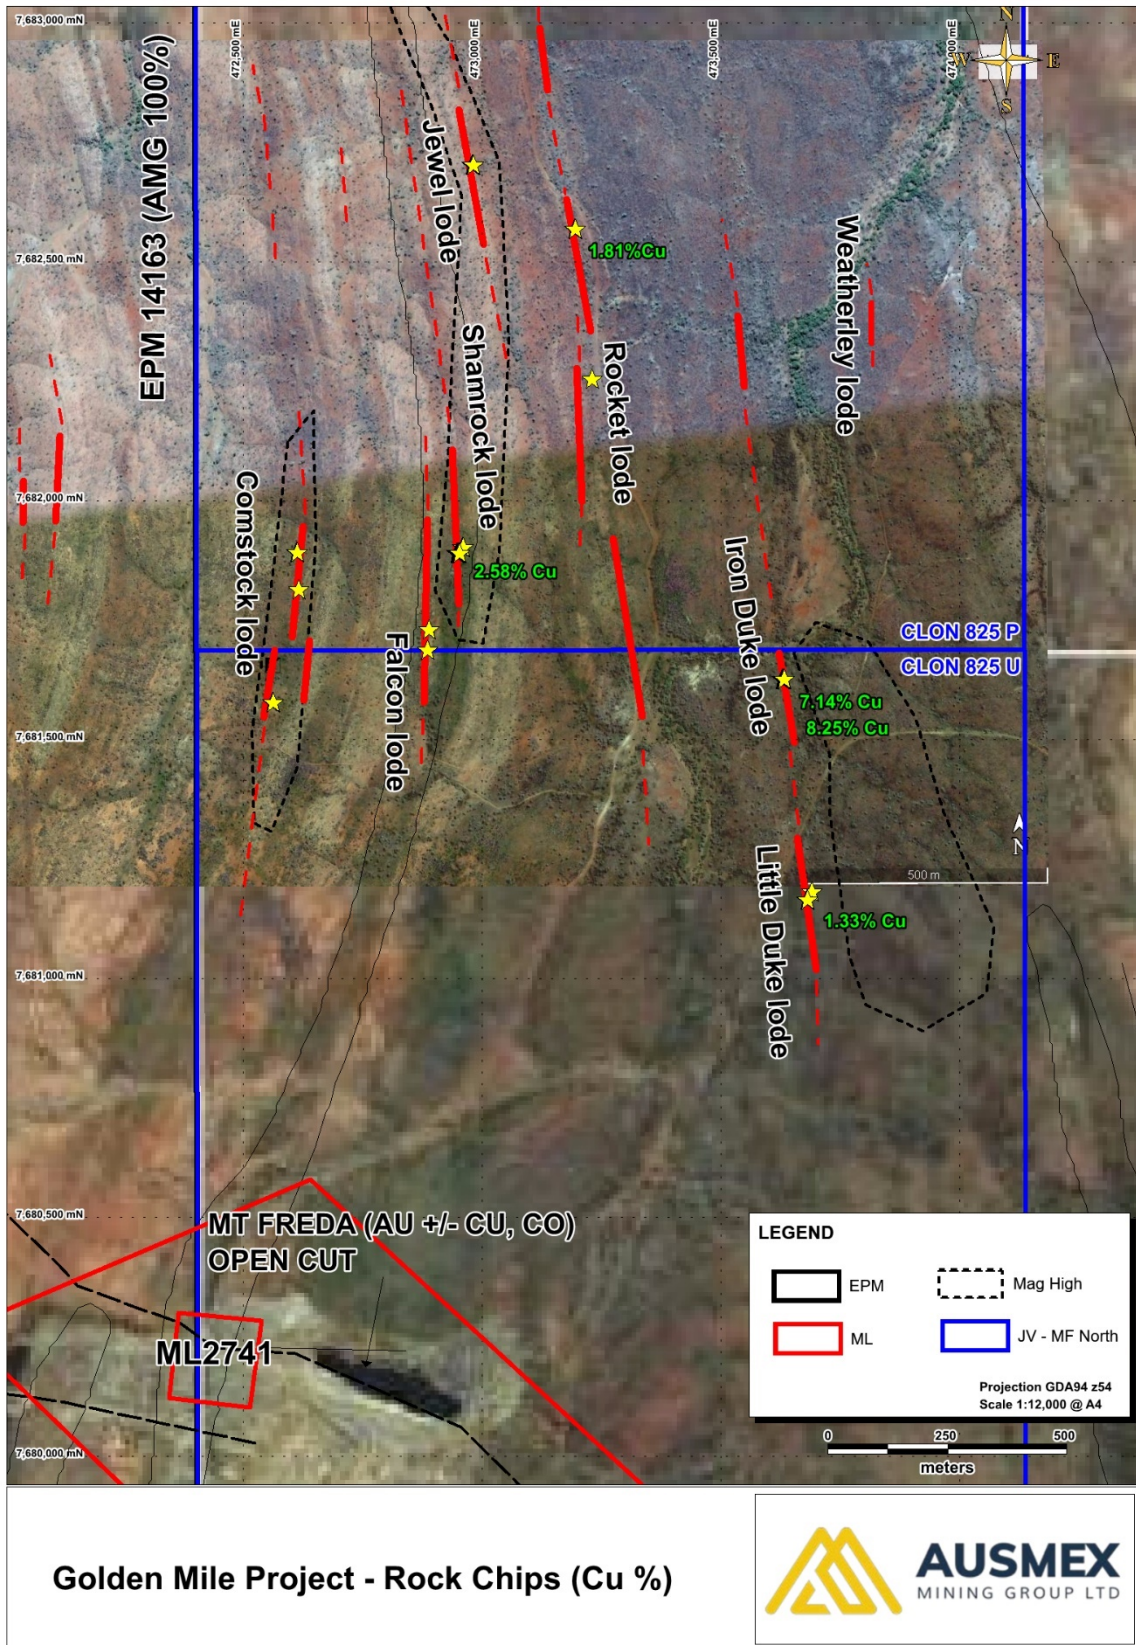

Figure 3. “Golden Mile” high grade copper rock chips, note the very high copper values found at the Iron Duke are adjacent a large regionally interpreted magnetic high that has an approximate strike length of 700 m.

**Ausmex Mining Group (ASX: AMG) (“Ausmex” or “The Company”)** is pleased to announce the maiden rock chip sampling results from the recently acquired “Golden Mile” Project, located within the two sub blocks CLON825P & CLON825U.

The Company has completed a preliminary field investigation including geological mapping and the collection of 124 rock chip samples from mullock heaps associated with historic workings.

Initial results and geological interpretations have far exceeded the Company’s expectations, with very high-grade gold, cobalt and copper identified that is associated with interpreted magnetic high anomalies at depth. Visible Cobalt in the form of Erythrite was identified at the Jewel prospect, with sample return assayed grades of up to 12,300 ppm Cobalt with 37.2 g/t gold.

Ausmex is currently designing a 1,500 m RC drilling program to test the historic high-grade gold, cobalt & copper mines, along a combined 3km strike length, with drilling planned to commence early July, 2018.

#### **Additional short-term drilling**

As well as the Golden Mile planned drilling in July, the company has recently commenced RC drilling at the 100% owned high-grade copper mining lease “The Trump” following on from maiden RC drilling results released in February this year that included 60m from surface at 1.30% Copper, (*Refer previous ASX announcement 8<sup>th</sup> February 2018*). Further RC drilling is planned for the high-grade copper project “The Joker”, (*Refer previous ASX announcement 19<sup>th</sup> January 2018*) and recently identified EM targets at ‘The Carpet’ copper- gold prospect, (*Refer previous ASX announcement 16<sup>th</sup> May 2018*).

#### **Managing Director Matt Morgan Stated:**

*“The recently acquired Golden Mile project adjoins the northern boundary of the Mt Freda mining complex. The latest rock chip assays of exceptionally high gold, cobalt and copper far exceeded my expectations and continue to confirm the mineral prospectivity of the underexplored complex. Mt Freda has a previous historical JORC resource that includes 1,000,000 pounds of Cobalt, now with the exceptionally high cobalt grades of up to 12,300 ppm immediately to the north of Mt Freda, combined with cobalt mineralisation the company discovered to the south of Mt Freda in December 2017 (Refer ASX announcement 6<sup>th</sup> December 2017), all indicators are that the area is shaping up to potentially host significant gold, cobalt, and copper mineralisation. The project just keeps getting bigger and bigger! We are very much looking forward to the maiden drill RC drill hole results once planned drilling commences at the Golden Mile project in July.*

*As we have recently commenced additional RC drilling at the 100% owned Trump ML high-grade copper project, and plan to continue further RC drilling at the exciting Joker high-grade copper project, as well as further RC drilling aimed at EM targets at the Carpet copper-gold project, shareholders should expect a continuous flow of exciting drilling results over the next few months”.*

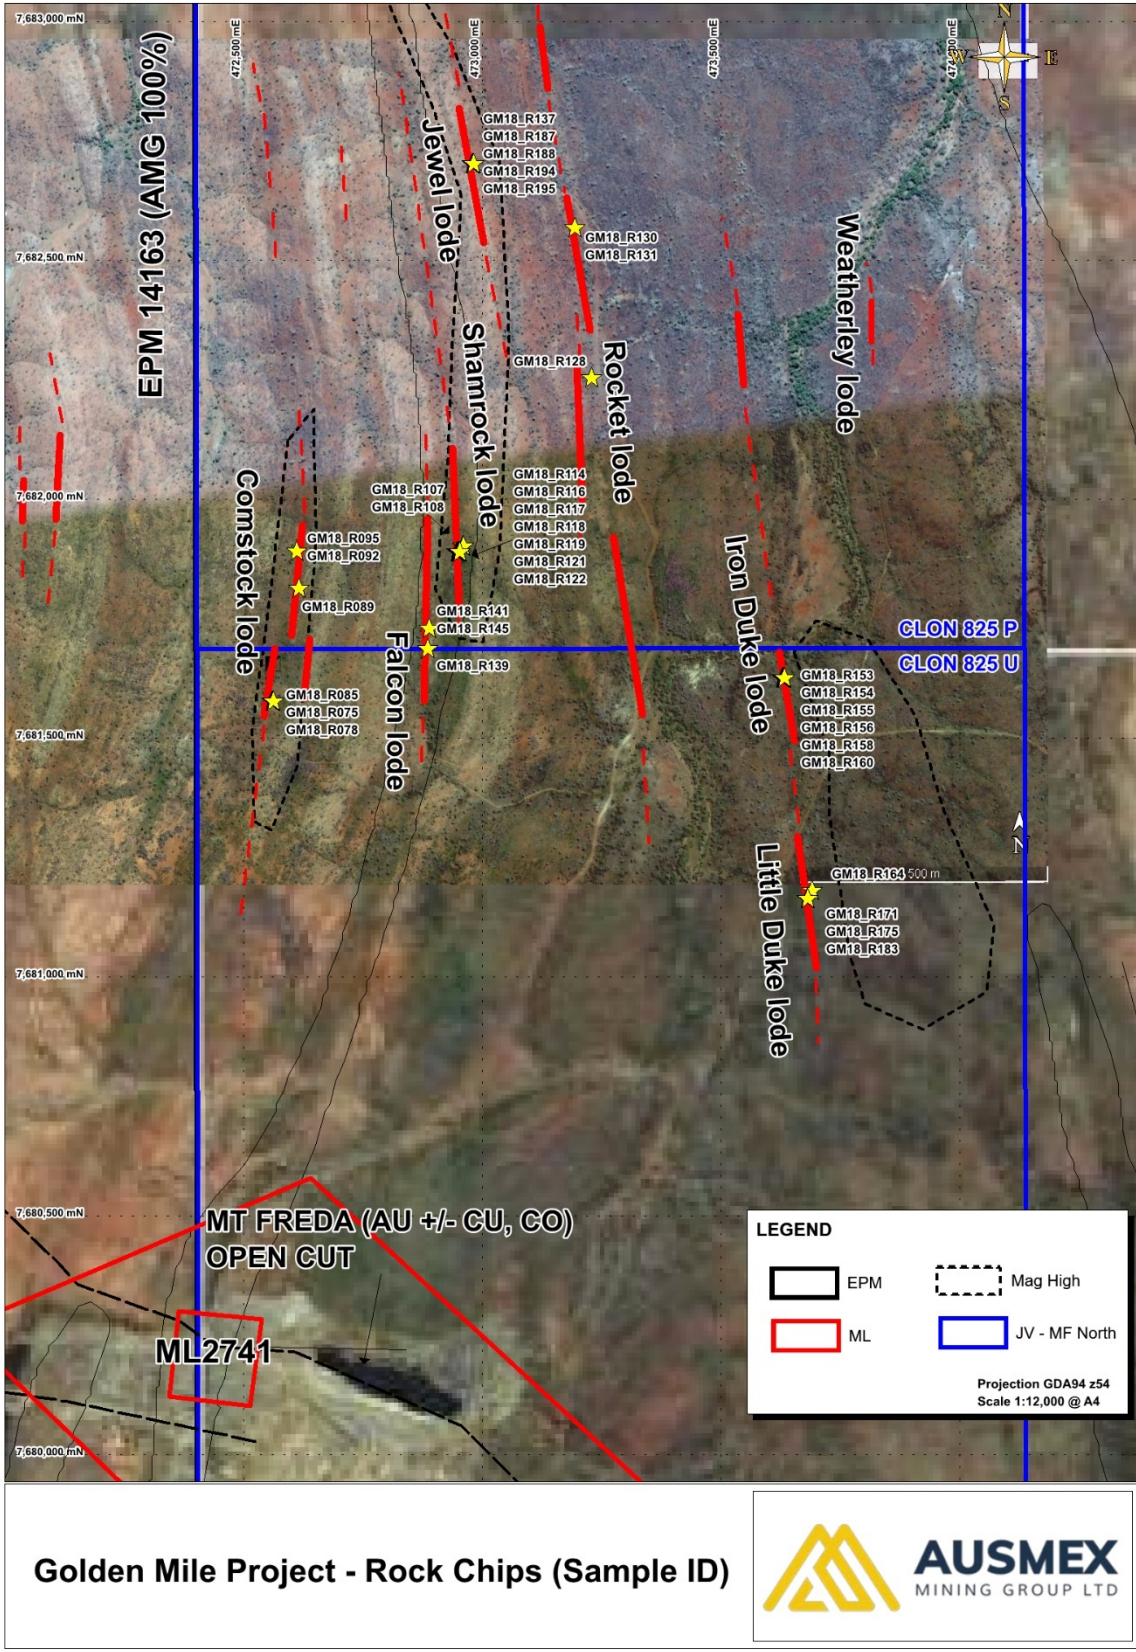

Figure 4. Golden Mile significant assay Rock Chip location plan.

**Image 2.** RC drilling has recently commenced at the high-grade copper project “The Trump” with assay results due early July.

Ends.

## Forward Looking Statements

*The materials may include forward looking statements. Forward looking statements inherently involve subjective judgement, and analysis and are subject to significant uncertainties, risks, and contingencies, many of which are outside the control of, and may be unknown to, the company.*

*Actual results and developments may vary materially from that expressed in these materials. The types of uncertainties which are relevant to the company may include, but are not limited to, commodity prices, political uncertainty, changes to the regulatory framework which applies to the business of the company and general economic conditions. Given these uncertainties, readers are cautioned not to place undue reliance on forward looking statements.*

*Any forward-looking statements in these materials speak only at the date of issue. Subject to any continuing obligations under applicable law or relevant stock exchange listing rules, the company does not undertake any obligation to publicly update or revise any of the forward-looking statements, changes in events, conditions or circumstances on which any statement is based.*

## Competent Person Statement

*Statements contained in this report relating to exploration results and potential are based on information compiled by Mr. Matthew Morgan, who is a member of the Australasian Institute of Mining and Metallurgy (AusIMM). Mr. Morgan is the Managing Director of Ausmex Mining Group Limited and Geologist whom has sufficient relevant experience in relation to the mineralization styles being reported on to qualify as a Competent Person as defined in the Australian Code for Reporting of Identified Mineral resources and Ore reserves (JORC Code 2012). Mr. Morgan consents to the use of this information in this report in the form and context in which it appears.*

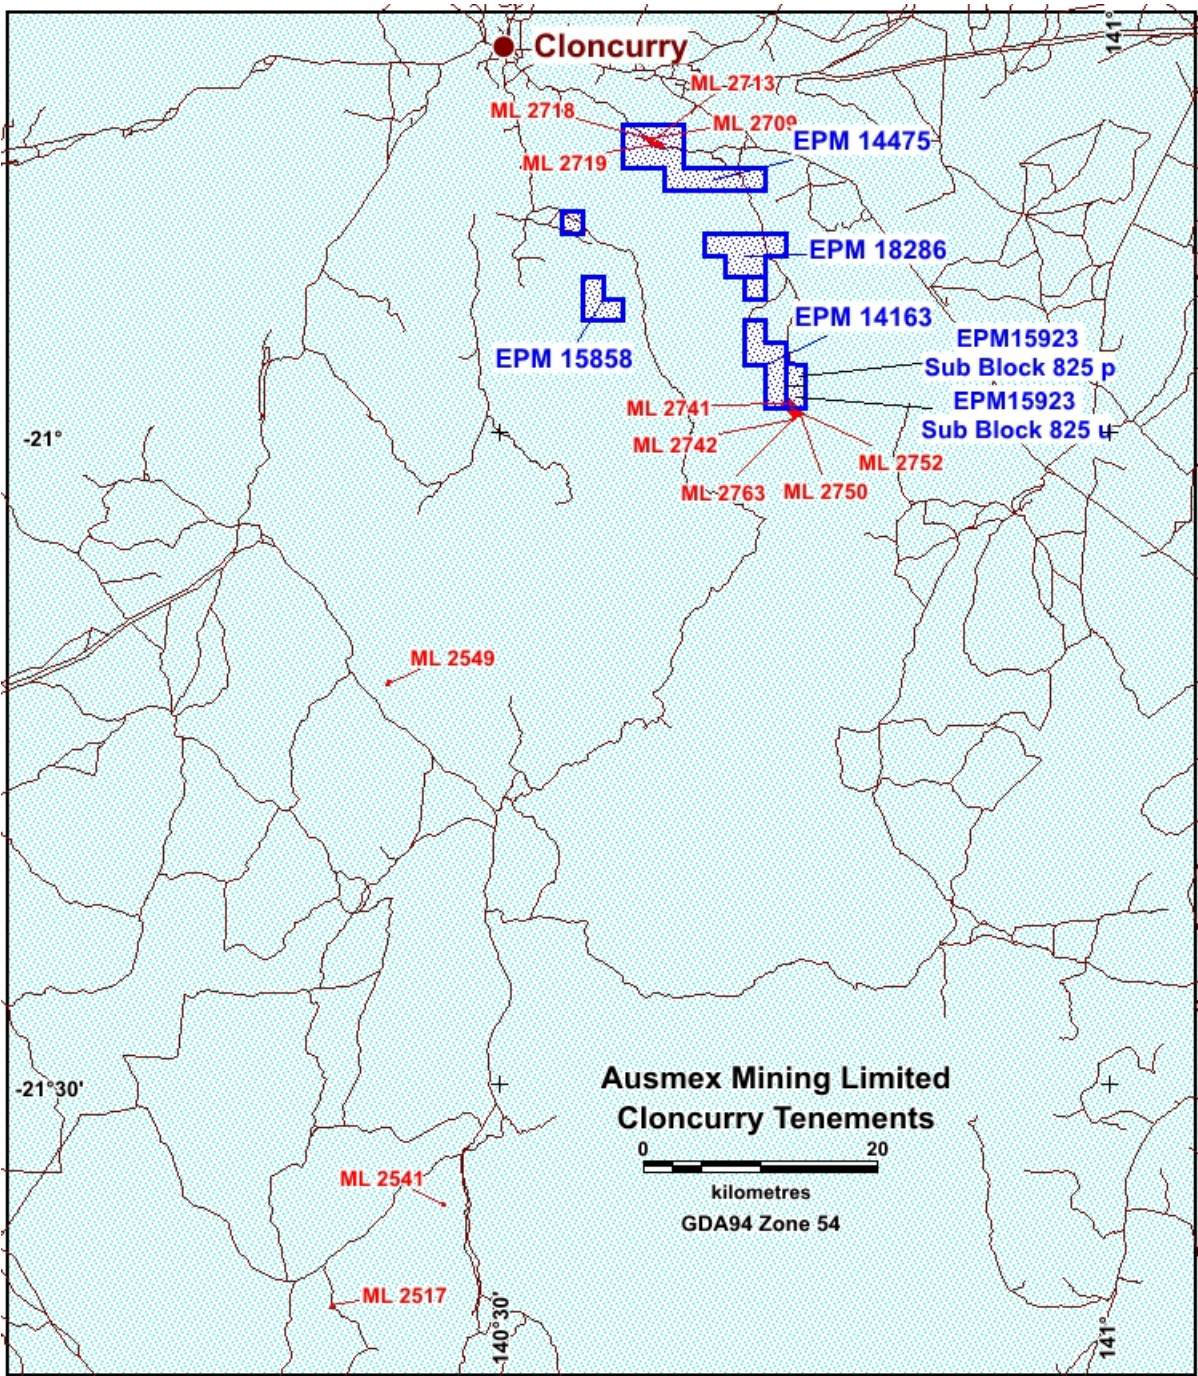

## Appendix 1. Full assay Golden Mile rock chip results and location table

JORC Code, 2012 Edition – Table 1 report

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> <li>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</li> <li>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> <li>Aspects of the determination of mineralisation that are Material to the Public Report.</li> <li>In cases where ‘industry standard’ work has been done this would be relatively simple (eg ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</li> </ul>	<ul style="list-style-type: none"> <li>Random Rock chip samples taken by G pick</li> <li>Samples were ~2-3kg in weight</li> <li>Samples were selected from mullock outcrops within the sub blocks CLON825U &amp; CLON825P</li> </ul>
Drilling techniques	<ul style="list-style-type: none"> <li>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<ul style="list-style-type: none"> <li>No drilling, logging or sampling was conducted as part of this release.</li> </ul>
Drill sample recovery	<ul style="list-style-type: none"> <li>Method of recording and assessing core and chip sample recoveries and results assessed.</li> <li>Measures taken to maximise sample recovery and ensure representative nature of the samples.</li> <li>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</li> </ul>	<ul style="list-style-type: none"> <li>No drilling, logging or sampling was conducted as part of this release</li> </ul>
Logging	<ul style="list-style-type: none"> <li>Whether core and chip samples have been</li> </ul>	<ul style="list-style-type: none"> <li>No drilling, logging or</li> </ul>

Criteria	JORC Code explanation	Commentary
	<p><i>geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</i></p> <ul style="list-style-type: none"> <li>• <i>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</i></li> <li>• <i>The total length and percentage of the relevant intersections logged.</i></li> </ul>	<p>sampling was conducted as part of this release</p>
<p><i>Sub-sampling techniques and sample preparation</i></p>	<ul style="list-style-type: none"> <li>• <i>If core, whether cut or sawn and whether quarter, half or all core taken.</i></li> <li>• <i>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</i></li> <li>• <i>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</i></li> <li>• <i>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</i></li> <li>• <i>Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.</i></li> <li>• <i>Whether sample sizes are appropriate to the grain size of the material being sampled.</i></li> </ul>	<ul style="list-style-type: none"> <li>• No drilling, logging or sampling was conducted as part of this release</li> </ul>
<p><i>Quality of assay data and laboratory tests</i></p>	<ul style="list-style-type: none"> <li>• <i>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</i></li> <li>• <i>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</i></li> <li>• <i>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Industry standard Fire assays for Au were completed by ALS laboratories for Gold &amp; ICP analysis for metals including Copper, Cobalt and Silver.</li> <li>• Repeat and checks were conducted by ALS laboratories whilst completing the analysis</li> </ul>
<p><i>Verification of sampling and assaying</i></p>	<ul style="list-style-type: none"> <li>• <i>The verification of significant intersections by either independent or alternative company personnel.</i></li> <li>• <i>The use of twinned holes.</i></li> <li>• <i>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</i></li> <li>• <i>Discuss any adjustment to assay data.</i></li> </ul>	<ul style="list-style-type: none"> <li>• NA</li> </ul>

Criteria	JORC Code explanation	Commentary
<i>Location of data points</i>	<ul style="list-style-type: none"> <li>• Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> <li>• Specification of the grid system used.</li> <li>• Quality and adequacy of topographic control.</li> </ul>	<ul style="list-style-type: none"> <li>• Rock Chip sample locations were determined by hand-held GPS readings at the location of each sample (accuracy +/- 5m) and recorded in MGA94, Zone 54 datum, details displayed in Appendix 1.</li> </ul>
<i>Data spacing and distribution</i>	<ul style="list-style-type: none"> <li>• Data spacing for reporting of Exploration Results.</li> <li>• Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</li> <li>• Whether sample compositing has been applied.</li> </ul>	<ul style="list-style-type: none"> <li>• Rock chip samples were taken randomly along ~ 3km of outcrop and mullock heaps</li> <li>• Data spacing and distribution is NOT sufficient for Mineral Resource estimation</li> <li>• No sample compositing has been applied.</li> </ul>
<i>Orientation of data in relation to geological structure</i>	<ul style="list-style-type: none"> <li>• Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</li> <li>• If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</li> </ul>	<ul style="list-style-type: none"> <li>• The orientation of samples is not likely to bias the assay results.</li> </ul>
<i>Sample security</i>	<ul style="list-style-type: none"> <li>• The measures taken to ensure sample security.</li> </ul>	<ul style="list-style-type: none"> <li>• Samples were taken to Cloncurry by company personnel and despatched by courier to the ALS Laboratory in Townsville</li> </ul>
<i>Audits or reviews</i>	<ul style="list-style-type: none"> <li>• The results of any audits or reviews of sampling techniques and data.</li> </ul>	<ul style="list-style-type: none"> <li>• No audits or reviews have been undertaken at this stage.</li> </ul>

## Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<i>Mineral tenement and land tenure status</i>	<ul style="list-style-type: none"> <li>• Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties,</li> </ul>	<ul style="list-style-type: none"> <li>• ML2718, ML2709, ML2713, ML2719, ML2741 &amp; EPM14163 are owned 100% by Spinifex Mines Pty Ltd. Ausmex Mining Group Limited owns 80% of</li> </ul>

Criteria	JORC Code explanation	Commentary
	<p><i>native title interests, historical sites, wilderness or national park and environmental settings.</i></p> <ul style="list-style-type: none"> <li><i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i></li> </ul>	<p>Spinifex Mines Pty Ltd. Queensland Mining Corporation Limited own 20% of Spinifex Mines. Exploration is completed under an incorporated Joint Venture.</p> <ul style="list-style-type: none"> <li>EPM14475, EPM15858, &amp; EPM18286 are held by QMC Exploration Pty Limited. Ausmex Mining Group Limited owns 80% of QMC Exploration Pty Limited. Queensland Mining Corporation Limited own 20% of Spinifex Mines. Exploration is completed under an incorporated Joint Venture.</li> <li>ML2549, ML2541, ML2517 are 100% owned by Ausmex.</li> <li>Ausmex hold an 80% beneficial interest in sub blocks CLON825P &amp; CLON825U</li> </ul>
<i>Exploration done by other parties</i>	<ul style="list-style-type: none"> <li><i>Acknowledgment and appraisal of exploration by other parties.</i></li> </ul>	<ul style="list-style-type: none"> <li>Refence to open file Regional geophysics and EM anomalies completed by QLD Minerals Dept.</li> </ul>
<i>Geology</i>	<ul style="list-style-type: none"> <li><i>Deposit type, geological setting and style of mineralisation.</i></li> </ul>	<ul style="list-style-type: none"> <li>ML2718, ML2709, ML2713, ML2719 hosts the Gilded Rose sheer hosted quartz reef. There are several golds mineralised hydrothermal quartz reefs within the deposit.</li> <li>ML2741 hosts the shear hosted quartz rich Mt Freda Gold deposit containing Au, Cu, &amp; Co.</li> <li>ML2549, ML2541, ML2517 host copper mineralisation associated with carbonate intrusions into altered mafic host rocks</li> <li>EPM14163 &amp; EPM 15858 &amp; CLON825P &amp; CLON825U contain There are several golds mineralised hydrothermal quartz reefs within the deposit containing Au, Cu, &amp; Co</li> </ul>
<i>Drill hole Information</i>	<ul style="list-style-type: none"> <li><i>A summary of all information material to the understanding of the</i></li> </ul>	<ul style="list-style-type: none"> <li>No drilling, logging or sampling was conducted as part of this</li> </ul>

Criteria	JORC Code explanation	Commentary
	<p>exploration results including a tabulation of the following information for all Material drill holes:</p> <ul style="list-style-type: none"> <li>○ easting and northing of the drill hole collar</li> <li>○ elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> <li>○ dip and azimuth of the hole</li> <li>○ down hole length and interception depth</li> <li>○ hole length.</li> </ul> <p>• If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</p>	<p>release.</p>
Data aggregation methods	<ul style="list-style-type: none"> <li>• In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</li> <li>• Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</li> <li>• The assumptions used for any reporting of metal equivalent values should be clearly stated.</li> </ul>	<ul style="list-style-type: none"> <li>• No drilling, logging or sampling was conducted as part of this release</li> <li>• No material information is excluded.</li> <li>• No intersections have been reported as part of this release.</li> <li>• Table 1 included significant samples that returned assays with values &gt; 10/ g/t gold, silver, Cobalt &gt; 1,000ppm &amp; copper &gt; 1%</li> <li>• Full assay results and locations are displayed in Appendix 1.</li> </ul>
Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> <li>• These relationships are particularly important in the reporting of Exploration Results.</li> <li>• If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</li> <li>• If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg ‘down hole length, true width not known’).</li> </ul>	<ul style="list-style-type: none"> <li>• No drilling, logging or sampling was conducted as part of this release</li> <li>• No material information is excluded.</li> <li>• No intersections have been reported as part of this release.</li> </ul>
Diagrams	<ul style="list-style-type: none"> <li>• Appropriate maps and sections (with scales) and tabulations of intercepts</li> </ul>	<ul style="list-style-type: none"> <li>• Maps showing the location of the EPMs and sub blocks are</li> </ul>

Criteria	JORC Code explanation	Commentary
	<i>should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i>	presented in the announcement
<i>Balanced reporting</i>	<ul style="list-style-type: none"> <li>• <i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</i></li> </ul>	<ul style="list-style-type: none"> <li>• All comprehensive Fire assay results for Gold and ICP results for Copper, Cobalt and Silver were included in Appendix 1.</li> <li>• Table 1 included significant samples that returned assays with values &gt; 10/ g/t gold, silver, Cobalt &gt; 1,000ppm &amp; copper &gt; 1%</li> </ul>
<i>Other substantive exploration data</i>	<ul style="list-style-type: none"> <li>• <i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i></li> </ul>	<ul style="list-style-type: none"> <li>• There is mention of historic mining for high grade gold and copper from historical QLD Mining Department Records</li> <li>• Reference to open file historical EM geophysical anomalies conducted by the QLD department of Minerals</li> </ul>
<i>Further work</i>	<ul style="list-style-type: none"> <li>• <i>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</i></li> <li>• <i>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Additional mapping, costeans, geophysical surveys, RAB, RC, and Core drilling</li> </ul>
